SECRETARY OF THE
COMMISSION

RE: Kilarc/South Cow Creek Power
Whitmore, CA

2010 AUG 26 A 11:48
P#606
FEDERAL ENERGY
REGULATORY COMMISSION

ORIGINAL

I find unconscionable the idea that the FEDERAL ENERGY REGULATORY COMMISSION would even consider:

- A. Destroy a **working green hydro electric plant.**
- B. Fill in and destroy a viable outdoor space for the handicap, elderly, small child
- C. Put the community of Whitmore in a fire danger with no large body of water available to fight the forest fire with helicopters
- D. Effect the numerous elderly homeowners water wells and those of the working ranches in the Whitmore area
- E. Effect the local economy with the loss of visiting fisherman. We're already in the worst of economic times and Whitmore is not immune.

Note: Kilarc has been here for over 100 years and we have been doing just fine. There are no endangered species, no salmon (never has been), and to try and **FIX SOMETHING THAT IS "NOT BROKEN" makes no sense.**

The Shasta Evergreen proposal, supported by the public, Shasta County & SPI is a win/win proposal for all and would preserve the reservoir, improve the wheelchair accessible picnic area, run the hydro plants as a source of green power, provide jobs, preserve the environment & historical artifacts. In addition a conservation area is proposed that would enhance fish habitats! There is no logical reason that the proposed decommissioning cannot be stopped.

If in doubt, DON'T

What are you thinking?

Respectfully,

Charles and Deborah Nicora
